Insect control

YOUR DUAL STRIKE FORCE AGAINST FALL ARMYWORM

Both **Coragen®** and **Steward® 150 EC** are now registered for the control of Fall Armyworm (*Spodoptera frugiperda*) in maize. Rapid discontinuation of feeding and immobilization of larvae make these proven larvacides your first choice frontline defence. The alternation of **Coragen®** with products having a different mode of action (e.g. **Steward® 150 EC**) is recommended.

For more about the many benefits of **Coragen®** and **Steward® 150 EC**, contact your local crop protection retailer, or FMC representative.
